2 About us

We map the world - since 1931!

We are one of Europe's leading companies in delivering surveying and mapping excellence from millimeter precision to country-wide coverage.

Our **business units**

- Airborne Data Acquisition
- 3D Mapping
- Consulting and Training

Our **core competences**

- We integrate state-of-the-art sensors and technologies into customized solutions, combining airborne, terrestrial, geotechnical and environmental sensing capabilities.
- We understand the needs of our clients in business and government and focus on professional and transparent project management.
- Our network of clients and partners allows us to tackle challenging projects and reliably develop and deliver efficient services and products.

Our **international experience**

- Our office locations in Switzerland, Germany, Norway and Colombia give us a global reach with local experts
- We are successful in the geospatial market since 1931 and have reached an international customer base in more than 50 countries just in the last decade.
- We are proud of our landmark projects, such as the complete survey of the 57 km-long Gotthard-Basetunnel in Switzerland, the world's longest railway tunnel.

Our **vision**

- We believe in achieving success in close, eye level relationships with our clients and partners.
- Innovation and continuous training allow us to evolve with the market and actively develop new opportunities.
- With our employees, we live an honest, open and responsible company and communication culture, as we are convinced that this is the key to our long-term success.

3 Products and Services

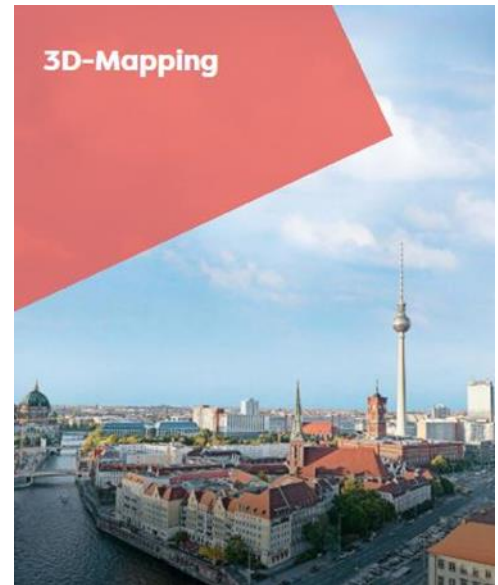

3D Mapping

Airborne Geodata Acquisition

3D Mapping is based on airborne data acquisition using a wide range of digital sensors installed in our three aircrafts or helicopters. Typical sensors are

- large format photogrammetric cameras (nadir and/or oblique) for aerial imaging, orthophotos, TrueOrthos, 3D-dense matching etc.
- LiDAR-sensors for 3D-point cloud acquisition and Digital Elevation and Surface Models
- thermal-scanners, hyperspectral-scanners and others.

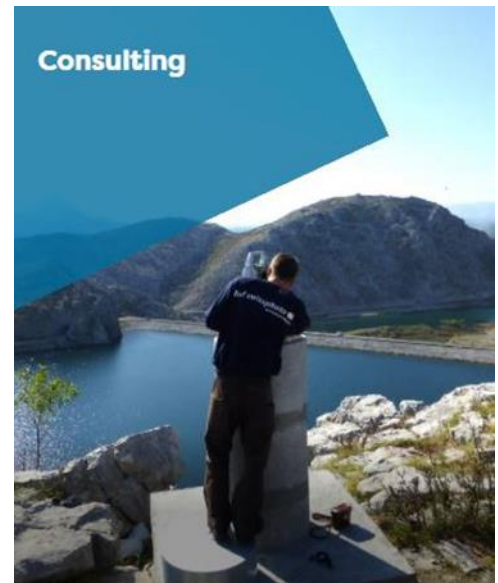

Geographic data in 3D on large scale are used for a wide range of tasks in planning, engineering and environmental projects.

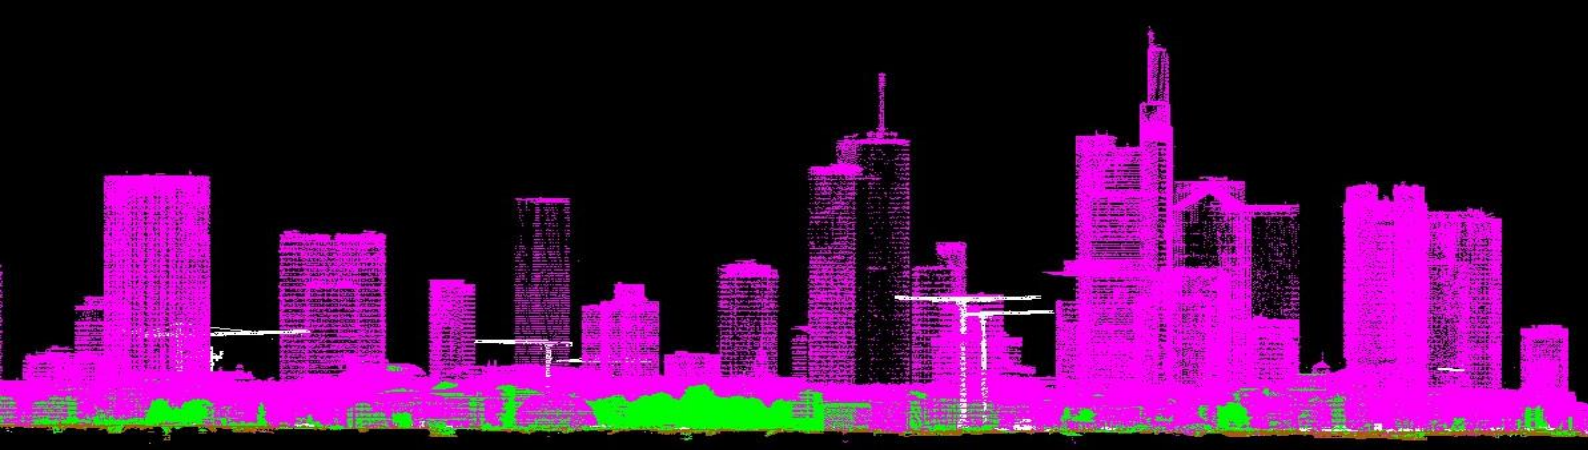

Consulting

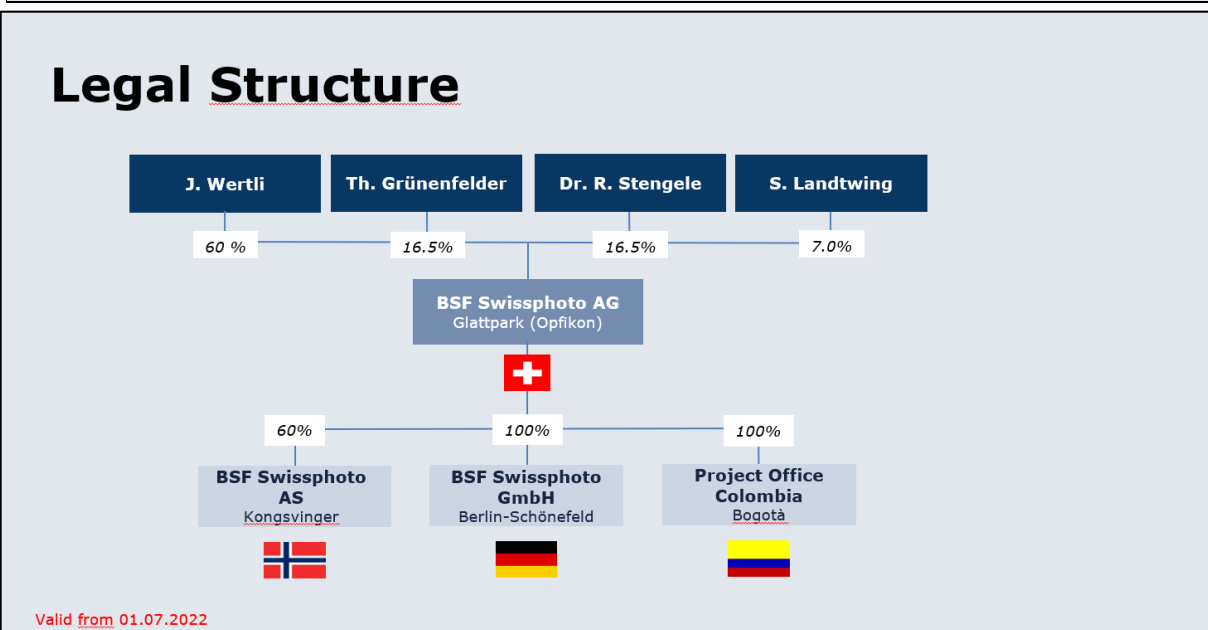

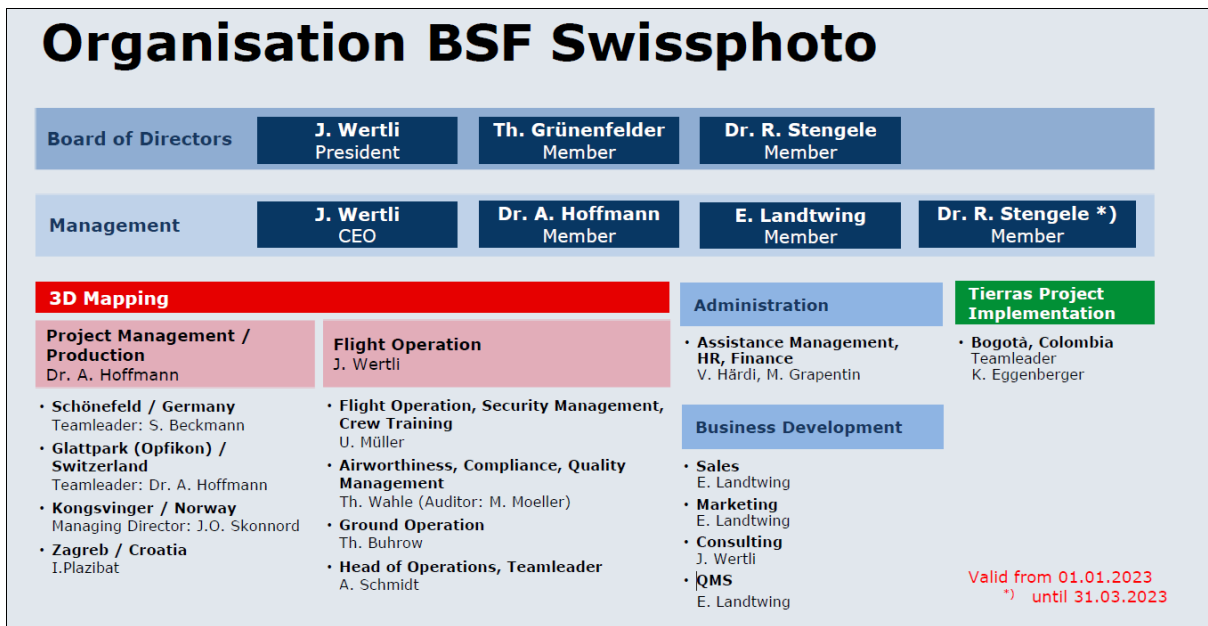

Successful projects thanks to our experience and knowhow.

BSF Swissphoto covers a wide range of consulting services. We support our customers and project partners with know-how-transfer in our specialties GIS, photogrammetry, remote sensing, geodesy, engineering surveying, cadastre, land use and land registration. We work in inter-disciplinary teams and cover organizational, technical, economic, and legal aspects.
